LAMPES D'ÉMISSION

- Les lampes TUNGSRAM d'émission et de grande puissance sont remarquables par leur précision et leur qualité. Elles comprennent les types les plus évolués, telles que les pentodes modernes, les lampes à anode de graphite et les valves à vapeur de mercure à cathode protégée.
- La fraction caractéristique de la désignation des lampes TUNGSRAM est composée de 2 nombres, dont le premier désigne la puissance dissipée, le second la tension anodique maxima.
